LEADERS IN GENETIC FERTILITY SCREENING™

EVOLVE EARLY PREGNANCY™ SCREEN

Prenatal Screening
for Your Peace of Mind

SCREEN TODAY. PROTECT TOMORROW.

ONE SIMPLE SCREEN. ONE STEP CLOSER TO A HEALTHY FUTURE.

Safe, Reliable, and Non-Invasive
Prenatal Screen for Fetal
Chromosome Health.

WHAT IS NON-INVASIVE PRENATAL TESTING (NIPT)?

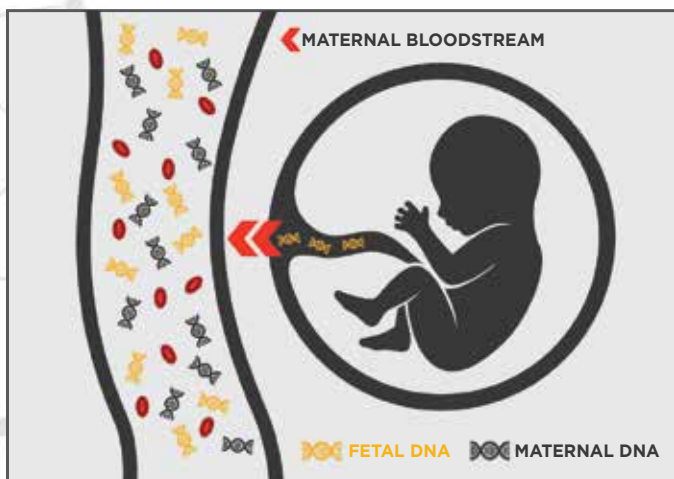

Non-invasive prenatal testing is a method to screen for specific chromosome abnormalities. The EarlyPregnancy™ Screen is performed on a simple blood draw to provide reliable results delivered accurately.

Safe & trustworthy screening recommended for all pregnancies, regardless of maternal age or risk, including pregnancies conceived by in-vitro fertilization (IVF) and assisted reproductive technologies (ART).

The procedure can be performed as early as 10 weeks in pregnancy, with just one tube of maternal blood.

Reliable results are available just days after your blood sample is received!

CELL FREE FETAL DNA SOURCE

Approximately 10% of the cell-free DNA found circulating in the mother's blood stream comes from the baby, which is sufficient genetic material to determine the likelihood of your baby having chromosome abnormalities at 10 weeks gestation.

Best Results When Ordered Before 24 Weeks in a Pregnancy

WHO SHOULD CONSIDER EVOLVE EARLYPREGNANCY™ SCREEN?

EarlyPregnancy™ Screen is available to any pregnant woman from the 10th week of pregnancy. More accurate results compared to traditional prenatal screens for every pregnant woman including those with high risk pregnancies. Pregnancies with low risk of chromosome abnormalities can also benefit from the EarlyPregnancy™ Screen.

ALL PREGNANT WOMEN SHOULD BE OFFERED EARLYPREGNANCY™ SCREEN

Examples of high risk pregnancies due to:

Maternal age-related risks

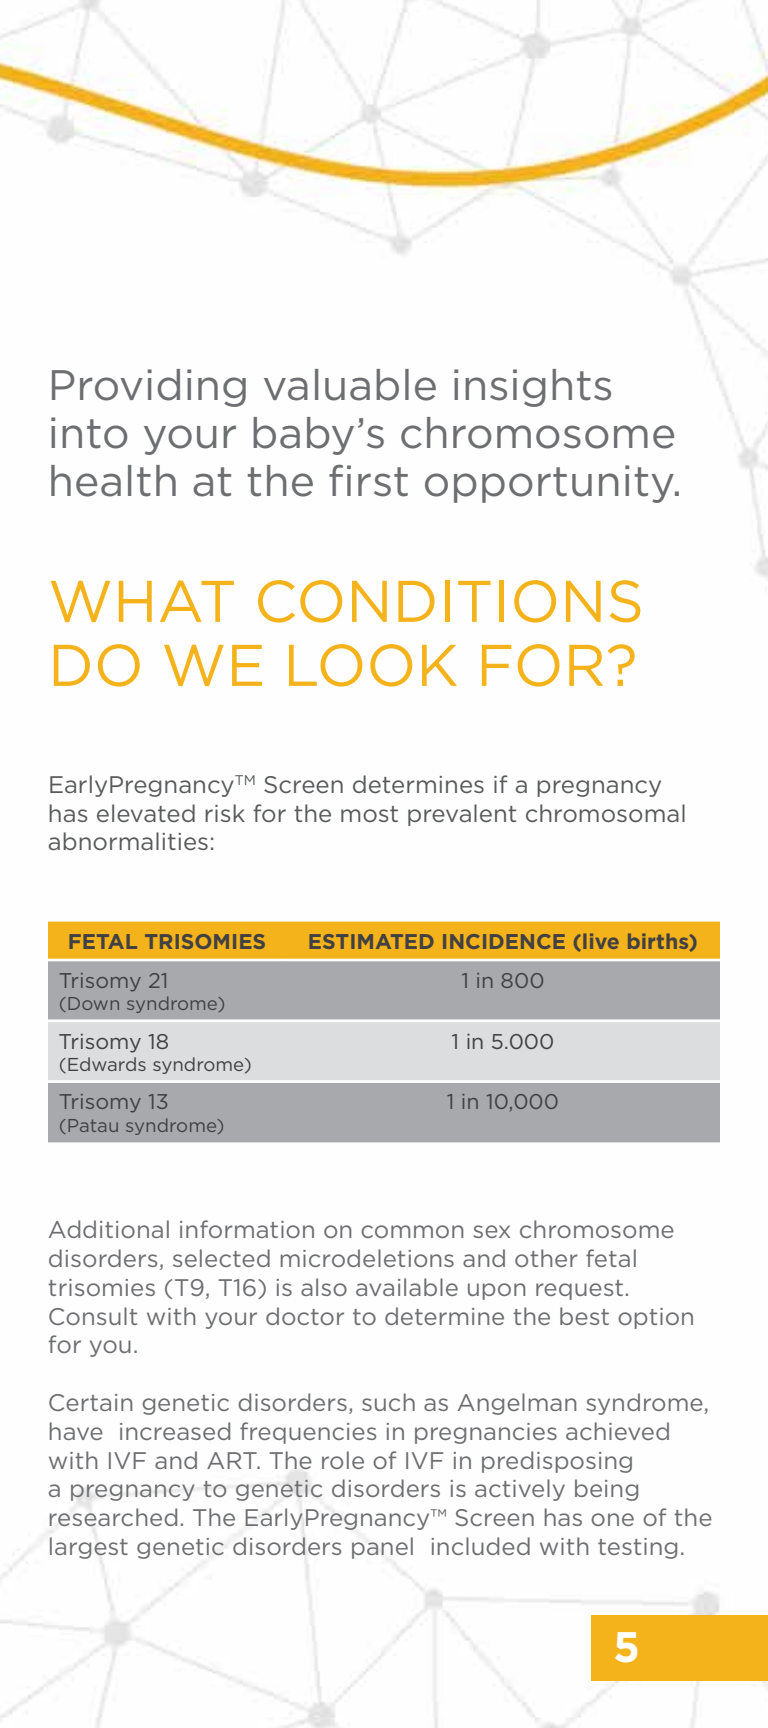

Positive results on maternal-serum screening

Abnormal ultrasound finding(s)

Family history of chromosome abnormalities

Pregnancies conceived through IVF

It is important to start a discussion with your doctor as soon as possible to understand your healthcare options.

Providing valuable insights into your baby's chromosome health at the first opportunity.

WHAT CONDITIONS DO WE LOOK FOR?

EarlyPregnancy™ Screen determines if a pregnancy has elevated risk for the most prevalent chromosomal abnormalities:

| FETAL TRISOMIES | ESTIMATED INCIDENCE (live births) |
|----------------------------------|-----------------------------------|
| Trisomy 21 (Down syndrome) | 1 in 800 |
| Trisomy 18 (Edwards syndrome) | 1 in 5,000 |
| Trisomy 13 (Patau syndrome) | 1 in 10,000 |

Additional information on common sex chromosome disorders, selected microdeletions and other fetal trisomies (T9, T16) is also available upon request. Consult with your doctor to determine the best option for you.

Certain genetic disorders, such as Angelman syndrome, have increased frequencies in pregnancies achieved with IVF and ART. The role of IVF in predisposing a pregnancy to genetic disorders is actively being researched. The EarlyPregnancy™ Screen has one of the largest genetic disorders panel included with testing.

WHY EVOLVE EARLY PREGNANCY™ SCREEN?

Minimizes anxiety during the critical early stages of your pregnancy by reducing the need for multi-step screening and risky invasive procedures.

Most advanced technologies providing reliable results and fast turn-around times.

Performed by a leading Genetic Testing CLIA Certified laboratory in the USA. EvolveGene® is built on the foundation of over 25 years of service and scientific commitment and technology advancements in the field of Reproductive Health.

Evolve EarlyPregnancy™ Screen is an accurate screen with the lowest technical failure rates in the industry at 0.1%, enabling high detection rates and reducing the number false positive results.

Validated for use in single and twin pregnancies and can be performed as early as 10 weeks!
